

2010-2011 ANNUAL REPORT

April 1, 2010 - March 31, 2011

Asian Rural Institute

Rural Leaders Training Center

ACHIEVEMENTS OF 2010

"The year of positiveness" is how the 2010 training program is being described. From beginning to end this group possessed tremendous energy and motivation. Continuous questions and discussions about how to adapt this learning to their own context made it clear their heart was in it for the benefit of their people back home. With great excitement we sent out 29 additional graduates from 16 countries to join with the family of ARI graduates working worldwide.

ARI continuously strives to further our impact rural communities worldwide by extending our training opportunities to new regions. Through cooperation with the Japan Evangelical Lutheran Assoc., The United Methodist Church, USPG Anglicans in World Mission, The United Church of Christ and The Christian Church (Disciples of Christ), we were able to welcome our first participants from these 4 countries.

In 2008 it was just a drawing and a dream. Now it is a striking, practical, energy efficient farm facility – well almost. The earthquake has delayed its completion, but progress is still good.

ARI is a place of profound transformation. To help nurture and guide participants through this period of sometimes wrenching personal growth, the *Growth File* and *Reflection Day* were introduced to the curriculum. These were well received and many participants said they plan to introduce these methods in their community work.

Once again, graduates organized ARIGA meetings in many parts of the world, coming together to share about their successes and struggles, to encourage each other and to renew their ARI spirit. **Kenya**, August 2010 (first meeting); **Sri Lanka**, January 2011; **Nepal**, February 2011; **The Philippines** (first nationwide gathering), February 2011; **Manipur, India**, March 2011

Local farmers and businesses contribute to ARI in many ways, such as allowing us to use their land, selling our products, and providing us with leftover fish and tofu that we use as animal feed. As a way to show our appreciation, we organized a small event called a *Dan Dan no Kai*, where we made traditional Japanese sticky rice and played games.

Upon the initiative of several participants, our first completely student centered pig raising project was carried out. They took full responsibility for caring for the pigs from the time of weaning and fed only foods available in their home countries, successfully bringing them up to full body weight within 6 months.

Sales of our natural pork meat continued to increase and a consumers group called *Buta no Kai* (the pork club) was formed. A newsletter, *ARI Farm News*, is now delivered with each pork shipment to keep a close relationship with our customers.

The monthly FAMSIG meeting was resumed after many years in order to improve communication and collaboration among the staff of the **Fa**rm, **M**eal **S**ervice, and the **I**ncome **G**eneration section.

On September 23 the Asian Rural Institute Supporters Association (ARISA) held its second Peace Charity Concert for ARI. Vocalist Shigeko Suzuki and pianist Won Win Tuan provided their amazing musical talent and the participants also contributed with a rendition of Take My Hand. Over 650 people attended and ¥1,388,110 was raised for scholarships.

Our rice harvest was 7.7 tons, all organic, and more than enough for our needs for the next year.

Greetings from the Board Chair / Director

We successfully completed our 38th annual Rural Leaders
Training Program and we would like to truly thank you for your
support, encouragement, and particularly for your contributions to help us rebuild after the March 11th Great East Japan
Disaster. Without your loving support and prayers, ARI simply
would not exist. Now we are putting our energy into restoring
the campus and tackling the issue of soil contamination due to
the emission of radiation from the Fukushima Nuclear Power
Plant. However, the full report of these endeavors will not be
presented until next year's Annual Report. This disaster has
presented us with seemingly insurmountable challenges, but we
are striving to keep moving forward by believing in the words of
Romans chapter 5, that suffering produces perseverance; perseverance, character; and character, hope.

From here I would like to address the 2010 training program and financial report. We continued to work toward improving our financial health and once again this year, we were able to close our accounts in the black. We saw an increase in the number of scholarship sponsors both domestically and internationally and we also further developed our income generation section through expanding our product sales and short term training courses, such as the preparation course for JICA (Japan International Cooperation Agency) volunteers. From the day we were established ARI has received no government funding and we continue year after year only by your support and prayers. This year, as part of the 40th Anniversary Capital Campaign, we built a new farm shop. Though completion was delayed by the earthquake, we proudly held the dedication ceremony on May 14. Due to this disaster, however, it was decided to discontinue the 40th Anniversary Campaign in order to formulate a new campaign focused on disaster recovery. As such the Farm Shop and an anticipated graduate impact study will be the only components of the original campaign.

We sent out another 29 graduates, this year, to work in and with their home communities in Asia, Africa, the Pacific, and for the first time, South America (Brazil). This number is also inclusive of our single Graduate Intern. Additionally, ARI graduate meetings were held in Sri Lanka, India, the Philippines, Nepal, and Kenya. The gatherings were organized by the graduates themselves, who find great importance and inspiration in coming together to exchange information and experiences. Whenever possible ARI sends staff to hear the voices of our graduates and better understand their work and their challenges so we may adapt our curriculum accordingly.

As usual we welcomed groups and individuals of all ages who came and worked with us and experienced the life we call Foodlife in this international community. We also received several members of the Cambodian Parliament as well as the Development Minster from South Sudan who were eager to get a better understanding of organic farming training. The reach of ARI's mission truly is broad. We would like to give our heartfelt appreciation to AFARI and ARISA members and all the people who contributed to ARI this year through donations, scholarships, travel grants, providing homestays, receiving speakers, and in so many other ways. And we give a special thanks to our volunteers who give so much of themselves working along with us each day. Thank you.

Board Chair: Dr. Akira Niwa

TRAINING REPORT

Rural Leaders Training Program - Training Report

Yukiko Oyanagi, Curriculum Coordinator

Year of 'Positiveness'

If I try to characterize this year's training with one phrase, it would be "The year of positiveness." The class of 2010 was so positive and highly motivated in their learning throughout the whole year, and it continued up to the last day - the day of their departure. They constantly sought out the meaning and purpose of every activity in the training. They even felt that failure or conflict were opportunities for learning. This attitude was reflected, not only in their learning here, but also in how they began to view their home communities. They started to value and be concerned about how to use their own local resources, traditional wisdom, and indigenous culture. They heartily embraced the fact that their learning is not for themselves but for their people, and they were continually thinking about how to utilize ARI skills and knowledge for their own communities. Moreover, that thinking started to expand from organic farming to social welfare, education, peace building, and the environment. They often had discussions about the direction of development in their countries, what is sustainable development, and what is true development. They began to say things like, "I thought my community is poor, but we are rich." "I thought we have nothing, but we have many things." "I thought my people are illiterate, but I realized they are wonderful people who know about our traditional wisdom." When I heard these things, I felt that one of the most important purposes of our training was achieved.

Dream for their Home Communities

In the last part of the training, the participants shared about their dreams for their communities. Most of them said, "My dream is to build a sustainable society where we can have environmentally healthy and safe food." Many of them repeatedly mentioned that organic farming and leadership are steps to achieve these dreams. In ARI, we believe that building a rural community which is sustainable by being self-reliant in food through the utilization of local resources is the true direction for our future rural development. This message was enthusiastically received by our participants.

Growth File

As a new measure in our training this year we introduced a *Growth File*. All of the participants and also all of the staff were provided with a Growth File, in which we recorded our learning experiences, in all their different forms. The participants shared their Growth File with other participants and staff in group consultation, so that they could see the learning taking place at ARI from different perspectives. With this Growth File system, they understood that their learning is not something that happens only in a classroom, and not only from successes, but from all the varied aspects of living in a multi-cultural self-sustaining community, and even from difficulties or failures.

TRAINING REPORT

Field Management Activity and Leadership

In 2005 we started the system called *Field Management Activity*. This system has now become the core of our training on organic farming and leadership. The participants are divided into four groups, and each group takes care of a field (about 0.2 Hectares) and a livestock section (fish and duck, pig and cattle, poultry). Each group chooses one group leader who serves for two weeks and the participants have an opportunity to be leader two times. The group leader must facilitate the group plan and take responsibility for the animals and field, together with the help of staff. They also take a turn once a week in coordinating the cooking of the meals. If there is conflict in the group, the leader will have to take initiative to work through it. If somebody is sick, the leader takes concern. The leader conducts meetings and carefully observes the fields and animals. These are important characteristics and skills for rural leadership. After two weeks, each group leader has a reflection session with staff, to look at how they performed and might improve in the future.

Servant Leadership

The ideal leadership style in ARI is called *Servant Leadership*. The participants often heard this word during classes and observation trips. But the place where they practiced this servant leadership was in daily life. In cleaning, in Foodlife work, in dish washing, or in group meetings, their traditional view of leadership was challenged. Even if they could talk with very beautiful words about leadership, it was very difficult to do in action. We twice carried out sessions in which participants drew a picture of the important qualities of rural leaders, once in April and once in November. Some of the participants observed that, "In April, we just put ideal and beautiful words from a book. In November, it became more practical." That means *real leadership* came out from the book and was put into practice.

I want to express my deep thankfulness for God's abundant blessings and guidance on our 2010 Rural Leaders Training Program at the Asian Rural Institute. I am also grateful that together with the cooperation and assistance of many friends and supporters, we were able to successfully complete this year's program and send out 29 new graduates of 16 nationalities.

Practical Field Study (PFS) Learning by Doing

TRAINING REPORT

New Approaches in ARI Training – Growth File and Reflection Day

Life and learning at ARI are intense. Anyone who has been here for even a short time will know this. The daily schedule is packed from early morning. The people are full of energy and utterly diverse in culture and character. The philosophies we live by are challenging on many levels. And though the training lasts nine months, the days fly by. With participants being exposed to so many new experiences and new ideas so quickly, one of the challenges becomes how they can absorb or digest their learning. Where can they find a space to reflect on their experiences and

those things that have impacted them? How can they break down their experiences and interpret them within their own understanding, culture, and life experience?

These are questions that staff have been asking as we seek ways to improve our curriculum. We have already created several forums designed to help participants process their learning, such as group discussions and personal consultation. Even morning gathering sharing is an excellent place to share personal learning reflections. While these have been successful, we still felt there needed to be something more. So this year we introduced the practice of keeping a Growth File.

At the beginning of the year participants were given their own Growth File notebook. In it we encouraged them to simply start recording their learning. They could write at any time about anything; not only about classes, lectures, or practical study, but about any aspect of ARI life. Learning at ARI is everywhere; from the group vegetable fields, to conversations in Koinonia, to visits to a neighboring organic farmer. Even failure or conflict is a learning opportunity. We asked them to be on the lookout for experiences that moved them, interested them, impacted them, or provoked them and write about these critical moments. The file was not meant to be submitted to

any teachers or staff, but was purely for their own purpose. As such they could write freely, honestly, messily if they wanted to, and in their own language (a crucially important point). They wrote about things such as a new agricultural technique they learned, a philosophy of an organic farmer they heard during an observation trip, a conversation with their roommate, their feelings about doing dish washing, a talk with a staff member in the field, and many more. As time went on they really took this exercise to heart, seeing it as an important part of their long term learning process and it was amazing to watch their notebooks grow thick. As this was a new trial, the staff felt it important that they too keep a growth file in order to fully understand this learning process. Staff files also began to fatten quickly and they discovered this to be useful not only as a curriculum tool, but for their own personal growth as well.

Additionally we started to hold monthly reflection days in which we met in small consultation groups to share our growth files. As the contents of the files might be personal, the expectation was to discuss only those topics people wanted to share. When the first person started to talk, however, others quickly joined in. One of the Key Concepts of ARI Training is *Learning within Diversity*. Both *learning* and *diversity* fully came out on this reflection day as we listened to people's different (or some-

times surprisingly similar) points of view. To share one example, one of the groups got to discussing the Rural Community Study Tour in Northern Japan. One participant said flat out that "rural Japan" is not "rural." Paved roads, electric lines, and other conveniences would never be found in the rural areas of their country. This led to a discussion on "what is rural?" and "what is development?" Thoughts and ideas started coming from the group members' learning from observation trips, classroom sessions, experiences in their own communities, and differences between Japanese host families they stayed with in the city and in rural areas. Then the discussion turned toward the question of what is true development and what direction toward development should a grassroots rural leader try to follow.

The Growth File and Reflection Day greatly helped participants discover not only what they were learning, but how they were growing. Many participants have said they intend to take these practices back home to utilize in their work and communities. Though it has only been a one year trial so far, it can already be determined to be a great success which we will continue develop.

Community Based Curriculum Activities – Learning within Diversity

"My dream became a dream with people and not a dream for them '

Daneth Him – ARI graduate Cambodia

Practical field study

Morning and evening Foodlife work – daily care for our fields and livestock and meal preparation

Group field and livestock management activities

Community work days – rice transplanting, rice harvest, forest management

Spiritual nurturing – morning gathering, consultation, growth file, and reflection day

Oral presentations

School events – Harvest Thanksgiving Celebration, Opening Ceremony, Commencement Service

Community building days – picnics, hikes, sporting events International fellowship and home-stay programs

FOODLIFE REPORT

Livestock

In the rural regions that our participants come from you cannot find many farmers who raise poultry in pens. Often they will have four or five chickens running around the house eating insects, weeds, and whatever leftovers the family throws out to them. These chickens will lay six or seven eggs and then incubate them according to the motherly instinct of hens. Until those chicks are hatched, they will not lay anymore eggs. For villagers, eggs and chicken meat are a luxury.

In ARI we manage our livestock in a way that balances each animals' ability to live according to its natural character with our aim to increase production of meat and eggs for our own consumption and for sales purposes. The area that we monitor most carefully is the feed. We provide them with plenty of nutritious food, most of it coming from our own area. Leftover rice from school lunches, rice powder from a nearby sake factory, okara from two local tofu factories, fish parts from the fish market, rice bran, barley, and soy beans: these ingredients are mixed according to the nutritional needs of the livestock and fermented. Fermentation enhances the nutrient value of the ingredients and also allows for long term non-refrigerated storage. By these methods, our chickens can lay eggs continuously and our pigs can reach 100 kg (220 lbs.) in just six months.

While these approaches work very well in ARI, the more important task is to learn how they can be adapted to the participants' countries, especially knowing that they most likely do not have school lunch leftovers or a neighborhood tofu factory. This

year a group of participants took the initiative to raise a litter of pigs using only materials they can find in their local environment. The project was quite successful. While feeding mostly kitchen leftovers and grass, they closely watched the health and growth rate of the pigs. The staff also observed but took a "back seat" role. It was quite an achievement that they were able to bring the pigs up to full body weight in six months. Participants have commented that it usually takes much longer to fatten pigs, but this group said they were able to do it because they better understood about the nutritional needs of pigs at each stage of life, and could provide for those needs using alternate kinds of feed. This was a tremendous step toward self-sufficiency and with big smiles, the group announced at the commencement ceremony that the juicy ham that was being served during the reception was from their own project.

Crops and Vegetables

Seed Self Sufficiency

Farmers around the world dream about high production and high income. Toward this end many of them purchase genetically modified seeds. This includes farmers in so-called developing countries. For example, in the Philippines, farmers purchase genetically modified corn seeds (GM seeds) from companies called traders. These farmers have no choice but to buy pesticides from the traders as well because the corn is modified not only to bear more fruit, but also to withstand strong pesticides. In other words pesticides and GM seeds are a set. Furthermore, these high yield varieties of corn require a lot of chemical fertilizers. GM seeds are expensive and the farmers

FOODLIFE REPORT

corn require a lot of chemical fertilizers. GM seeds are expensive and the farmers are poor, so they borrow money from the traders, who charge a high interest rate. In most cases the farmers' produce is purchased by the same trader at a low price. If there is any profit at all, it is very low and sometimes the farmers don't even break even and fall into a cycle of spiraling debt. To escape this scenario and to find true independence it is essential for farmers themselves to grow and protect their own seeds which match their own climate and soil and are strong against disease.

In ARI we have a long tradition of collecting seeds from our rice, wheat, barley, soy beans, red beans, sweet potatoes, garlic, and cayote. This year, our graduate intern decided to see if she could add to our seed collection list. Since seeds purchased from seed companies usually do not produce good second generation fruit, she decided to approach organic farmers. She was able to find heritage seeds for egg plants, tomatoes, cucumbers, kabocha (Japanese squash), and many more and sowed them in ARI so that they could continue to not only produce good food for ourselves, but also good seeds for years to come.

Connectedness of Life

In Japanese modern society it has become a custom to eat strawberry cake at Christmas. Nobody has a sense that this might be a remarkable thing to be able to do, considering that strawberries are naturally a summer fruit. But in ARI we cherish the seasonality of food and that is a part of our *Foodlife*. More than just growing vegetables, *Foodlife* encompasses the connectedness of life, from enriching our soil, to collecting seeds, to serving hot meals in the dining hall. This last point is one that may be overlooked by conventional farmers. In an effort to mass produce, it is easy to forget to consider the consumers' dining table, which can lead to overproduction and waste or underproduction and shortage.

From this year we started a system called Farm/Kitchen Management in which a person is designated each week to check the produce in the refrigerator and then walk through the vegetable gardens to make an efficient harvest plan based on actual need. This system brought about many interesting conversations, such as, "we have so many tomatoes this year, is there any way to use them up before they spoil?" We exchanged our ideas and decided to make tomato puree. One participant commented, "In the summer we overproduce tomatoes and throw so many away, yet we buy imported tomato puree. I will go back and start processing our tomatoes." This learning came about by thinking about the connectedness of life. If we are able to buy vegetables which are out of season just because we have money, we miss something very important. Through Farm/Kitchen Management, we were reminded of the relationship between growing vegetables, school meals, processing food, making use of overproduction and experienced Foodlife in yet another unique form

Meal Service

As a part of the training in the kitchen this year, we taught about having a well balanced menu. To help people visualize this, we color coded chief food categories into red, green, and brown and showed how by combining those colors we can have a balance of nutrition. Participants liked this system because it

FOODLIFE REPORT

was so simple. Also, at the start of each meal preparation we assigned a participant as kitchen leader, in charge of making the main dish and also coordinating the other cooks. The leaders would give instructions like, "Today 54 people are eating so we need to set seven tables. I' m stir frying pork and green veggies. We need soup and a side dish. Who can make these and what will you make?" Being able to manage a complicated cooking procedure within a limited time is good training for leadership. Also we worked closely with farm staff to go around the gardens and formulate a good harvest plan. It may seem a matter of course, but to view the weekly harvest through the perspective of the kitchen was a new experience. We also taught how to make soap and yogurt. The ARI kitchen is not just a place to

make the school lunch but a place where we share our food with the community and with visitors from within Japan and overseas. In order to welcome more guests, we increased our dining capacity with the support from kitchen members and other sections, which I believe is also our important achievement.

Solar Dryer for Fish Pellets

Compost needs to be turned from time to time to ensure fermentation throughout the mass by aerobic bacteria. It takes a lot of work to do this, so ARI constructed a step composting system behind the pigpen. Rather than turning, all that needs to be done is to push the compost onto the next level down. When it reaches the bottom of the four-step terrace, it is ready for use and kept there until needed. Unfortunately we once had an injury when someone slipped, so we discontinued its use.

After sitting for a while, we discovered this structure would be a perfect place to make a solar dryer for drying our homemade fish pellets. For several years we have been experimenting with producing our own fish food using locally available materials. One step in the process is to dry the pellets so they may be preserved longer. We started by painting the whole terrace black. Then we built a greenhouse over it using bamboo for the frame. As the air moves up the terrace it gets hotter and so the last step was to build a drying box at the top with a small air outlet in it. It is working beautifully.

Crops and Vegetable	28			
Rice	7752kg / 17,054 lbs			
	(150kg / 330 lbs for miso paste)			
Wheat	1328kg / 2922 lbs			
	(330kg / 726 lbs for soy sauce)			
Buckwheat	27.7kg / 60.9 lbs			
Potatoes*	880kg / 1936 lbs			
Sweet potatoes	1012kg / 2226 lbs			
Taro	1274.5kg / 2804 lbs			
Soy beans	350kg / 770 lbs			
	(330kg / 726 lbs for soy sauce)			
Black soy beans	180kg / 396 lbs			
	(150kg / 330 lbs for miso paste)

Livestock	
Eggs	77,800
Chicken meat	452kg / 994 lbs
Milk	4472 kg / 9838 lbs
Pork	90 Pigs
for ARI	8
sales to ARI consumers	37
sales to general market	45

Food Processing	
Egoma oil	103 bottles
Mìso paste	300kg / 660 lbs
Soy sauce	1952 bottles
Carrot juice	5048 bottles

*Due to overly wet conditions most of our potatoes rotted soon after harvesting. But we were able to make it through the year thanks to the kind-hearted donation of 900kg of potatoes from Raymond Epp of the Menno Village Organic Farm in Naganuma, Hokkaido and Rakuno Gakuen University, who paid to have them shipped to us!

つながる tsunagaru

Tsunagaru is a Japanese word that carries the meaning **connecting** and this year ARI's Income Generation team focused on Tsunagaru with people in our local area. We held a book market and flea market and also organized workshops on coffee roasting and Japanese tea making. These events attracted many new people who had never visited ARI before. The Tsunagaru book market was especially well received. Supporters from all over Japan donated their used books and a big crowd showed up the day of the market. We have decided to make this a yearly event.

Peace Concert and Peace Art Poster Exhibition

September 23, 2011 Kuroiso Culture Hall

Once again this year the Asian Rural Institute Supporters Association (ARISA) organized a Peace Concert to raise money for an ARI scholarship. Vocalist Shigeko Suzuki and pianist Won Win Tuan freely gave of their time and talent. Mary Tenneh Kpaka of Liberia shared about her counseling work with women victims of the civil war in her country and at the closing, ARI participants sang a rendition of Take My Hand, with the audience standing and joining hands (not a usual occurrence in Japan). Before the concert ARI staff Atsushi Yamaguchi delivered a talk called *Living Together with the Farmers of Afghanistan*. Mr. Yamaguchi had worked in Afghanistan with an organization called Peshawar Kai and has a strong passion to help build peace in that country.

Attendees: 650

Funds raised: ¥ 1,388,110

We also held a peace art poster exhibition in Nasunogahara Harmony Hall. Posters depicting images of peace were created by 100 artists of different nationalities. The exhibit traveled all around Japan and was shown the day of the Peace Concert. to make this a yearly event.

Won Win Tuan and Shigeko Suzuki performing at the Peace Concert

2 ARI Pork

From autumn of 2009 we began direct sales of ARI pork to customers on a trial basis. We had such a good response that in 2010 we expanded our network by creating a consumers club called *ARI Buta no Kai* (ARI Pork Club). We advertised membership and soon several people joined; each month they received fresh cuts of our pork. People are attracted to ARI pork because they know we raise our pigs naturally, using no growth hormones, no unnecessary antibiotics, and no imported feed and they are pleased with the freshness and juiciness of our meat. We are also proud to be able to provide this high quality product and at the same time improve our financial self-sustainability.

CAMPAIGN

Construction of new Farm Shop

40th Anniversary Capital Campaign

ARI will celebrate its 40th anniversary on September 16, 2013 the day officially established as our foundation day. From 2008, we have been carrying out a capital campaign to raise ¥250 million to rebuild the farm shop and main building and also carry out a survey of the activities of our graduates. After bringing in about 20% of that amount, the ARI Board of Directors altered the target to ¥80 million, eliminating the main building from the campaign.

The board felt a particular urgency to replace the farm shop due to its degraded condition and so construction was begun with the aim to have it completed by March of 2011. Due to the Great East Japan Disaster, we were unable to finish the building within the fiscal year, but on May 14th we proudly held a dedication ceremony and opened its doors. Having been completed so soon after the earthquake, it is a great encouragement to all of us at ARI to see this fresh new building rise up amid all the damage.

Since the earthquake caused extensive damage throughout the campus, we have been faced with the task of putting together a major plan for rehabilitation. Therefore the board of directors officially decided to end the 40th anniversary fundraising initiative and disband the committee. In its place we have started an earthquake reconstruction initiative called "Rebuild" and we are focusing our energies on raising funds for this.

We would like to extend our appreciation to Mr. Shijuro Ogata, Mr. Toyo Gyoten, Mr. Hiroshi Rinno and all the other promoters for their support for our 40th Anniversary Campaign. And for ALL of you who contributed to this project with your gifts and donations, we give you a huge "thank you" and invite you to please come visit us sometime to see the gorgeous new farm shop.

Internships at ARI

Over the years ARI has received a number of young people through their college or seminary internship programs. Most recently we have built a steady relationship with Wellesley College and Princeton Theological Seminary. Wellesley students are often focused on environmental issues and are attracted to ARI's commitment to sustainable agriculture. Princeton seminarians see this dynamic multicultural, multi-religious setting as a good place to cultivate their pastoral and leadership skills while working intimately with God's creation here on the farm. Working closely with internship coordinators and professors we ensure that the ARI experience meets the expectations of the university/seminary program. Recently ARI has made efforts to expand our internship opportunities to Japanese Universities. We have already begun hosting students from International Christian University and have had serious inquiries from several other universities. Likewise we are ready to open our internship offerings to other educational institutions in North America and Europe, including not only summer, but also semester long internships.

Interns

David Norse – Princeton Theological Seminary Rachel Smith – Wellesley College

Overseas Work Camp Groups

"Aloha Team" Harris UMC, Trinity UMC; Hawaii

Self Sufficiency in ARI

This financial report does not reflect the value of ARI's own farm goods that were supplied to the kitchen and food processing section which came to an approximate total of US\$165,000 in 2010.

Notice to Financial Statements

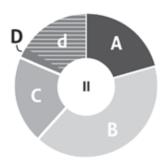

- * Exchange rate: ARI accounting is officially recorded in Japanese yen. Dollar equivalents have been stated in this report for the convenience of international supporters according to the 2010 average exchange rate of US\$1 = \$87.80
- (1) As ARI seeks to train some of the most marginalized people in the world, neither intl' participants nor their sending bodies are able to handle the costs of training. These expenses are covered by scholarships and contributions made by individuals and organizations. Japanese participants pay their own tuition and fees.
- (2) Includes contributions totaling \$72,300 received from AFARI
- (3) Details of operating expenses are listed on the opposite page
- (4) Does not include salaries paid for two missionary staff by their supporting churches (5) Revenue generated from seminars, special
- (5) Revenue generated from seminars, special short term training, and sales of farm produce, processed goods, and handicrafts

Domestic / Overseas Donations & Self-Generated Income

- A Domestic contributions 54% a ARISA 10.2%
- **B** Overseas contributions 26.7% **b** AFARI 4%
- **C** Self-generated income 19.3%

Donation Categories

- **A** Scholarships 20.7%
- ${f B}$ General donations 41.2%
- C 40th Anniversary Capital Campaign 19.7%
- **D** Special donations 18.4%
 - **d** designated for disaster recovery 16%

ARI vs. Volatile Food Prices

This week at one supermarket in Tokyo, lettuce was selling for \$6 a head. Even by Tokyo standards this is shocking. Of course food prices are always fluctuating depending on the season or the size of the harvest. But these days, as staple crops are treated as commodities and "food miles" continue to increase, factors such as oil and inflation also affect prices.

According to the Global Food Price Index of the UN Food and Agricultural Organization, food costs spiked in 2008 and again 2011. These high prices are particularly difficult for poor countries that import most of their food. In some regions families spend as much as 60-80% of their income on food. The only way they can cope with rising costs is to eat

fewer meals or buy cheaper, less nutritious food. Furthermore, high food prices cause unrest, especially in countries that are already experiencing ethnic or economic tensions.

/LIC¢*

At ARI most people are not aware of the price of a head of lettuce or a box of eggs. We simply eat what we have in our fields and animal pens. We essentially cut out the element of money by enriching our soil with compost rather than fertilizers, by feeding our livestock with locally available materials rather than imported feeds, and by collecting our own seeds. Our biggest investment is our sweat and labor and our reward is experienced at each and every meal. This is the ARI way of realizing food security.

RETURN SERVICE REQUESTED

That We May Live Together

Asian Rural Institute Rural Leaders Training Center

When the magnitude 9.0 earthquake struck

off the east coast of Japan on March 11, 2011, the ARI staff were in the middle of our final planning meeting for the upcoming training program - a meeting that never finished. The ground shook violently and all we could do was watch as windows broke and buildings twisted. We are deeply grateful that no one was injured; but our campus suffered extensive damage. The following day we began to clean up and repair our lifelines, such as electricity and water systems. The following day we also started to receive a flood of phone calls and emails to see if we were OK. AND from that day people started to send funds. No questions asked. Knowing that it would be needed, they just sent money.

We estimated that it would take about \$45,000,000 (\$62,500) to complete all the emergency repairs and we set a goal to have those done by May 31. However, by May 31 we had already received \$66,000,000 (\$825,000)! This tremendous show of love and support from all of you really gave us hope that we would be able to rebuild and bring ARI through our most serious challenge since our foundation.

Rebuilding, however, is an enormous task. Inspectors informed us that our Koinonia House (kitchen, dining hall, chapel, and conference room) and our Main Building (classroom, library, and administration offices) are not stable and we should replace them as soon as possible. Other areas of the campus were also damaged, and so the Board of Directors put together a comprehensive reconstruction plan that includes building a new Koinonia House (kitchen, dining hall), a classroom/library building, a chapel, a pigpen, and agricultural storage facilities. The estimated costs are ¥530,000,000. This is a daunting figure, but ARI has already been blessed with enormous support from friends in Japan and overseas and we are also working to solicit funds from the Japanese govern-

Despite all the troubles of this earthquake, we committed to hold our 2011 training program and welcomed our new participants on May 2. Seeing their faces was a great inspiration and reminder to us of the importance of our mission. Working together we will get through this crisis.
